

2007 F3D Subcommittee Report

Bob Brown, Chairman

A very successful World Championship was conducted this year by the Academy of Model Aeronautics in the United States. Competitors from sixteen countries enjoyed the event.

As a result of discussion prior to and during the World Championships, proposals have been generated to allow for identification markings to be officially understood within the F3D rules. The marking system allows for more efficient contest operation and judging.

The Subcommittee will also be discussing the final draft of the Netherlands Rule Proposal which was accepted in principle at the 2007 Plenary meeting. Mr. Metkemeijer provided the final draft on November 13, 2007.

Another successful year was accomplished with the F3D Eurocup. Most important is the fact that an introductory class (Q500) has been introduced. Pylon racing will certainly benefit by this added interest. Discussion is also being conducted that may lead to the inclusion of an Asian Cup for F3D. It is hoped the final result of the discussions will ultimately lead to a World Cup.
